

# Software Consultancy Website

Document Version: 1.0 | Project Type: Enterprise Software Consultancy / Digital Product Engineering Website |  
Implementation Environment: Cursor | Architecture: Full-stack Next.js + Payload CMS | Status: Ready for  
implementation

## SUMMARY

---

Build a premium, high-performance, enterprise-grade website for a software consultancy company.

## TECHNICAL SKILLS

---

Next.js 16.2.6+  
React  
TypeScript  
Payload CMS 3.x  
MongoDB Atlas  
Tailwind CSS v4  
shadcn/ui  
Lucide React  
React Hook Form  
Zod  
Motion  
GSAP (optional)  
Lexical Editor  
@payloadcms/db-mongodb  
next/image  
Sharp  
Resend  
Vercel Web Analytics  
Google Search Console  
PostHog  
Microsoft Clarity  
pnpm  
WCAG 2.2 AA  
Vitest  
Jest  
React Testing Library  
Playwright  
ESLint  
Prettier

## PRIMARY BUSINESS OBJECTIVES

---

Generate qualified leads and establish technical credibility through case studies, technical capabilities, product screenshots, architecture explanations, technology stack, client testimonials, engineering articles, measurable outcomes, and industry expertise.

## TARGET CUSTOMERS

---

Startups, growth companies, enterprises, and product companies.

## **ARCHITECTURE PRINCIPLE**

---

Payload CMS and the public website should run in the same Next.js application with App Router, Payload Admin, Local API, API routes, and server actions connected to MongoDB Atlas.

## **RENDERING ARCHITECTURE**

---

Use React Server Components by default and introduce client components only when interactivity requires them.

## **SITEMAP**

---

Includes routes for services, solutions, case studies, work, technologies, products, insights, about, process, team, careers, contact, privacy, terms, and sitemap.

## **ACCESSIBILITY TARGET**

---

WCAG 2.2 AA with semantic HTML, keyboard navigation, visible focus, logical headings, contrast, accessible forms and errors, alt text, reduced motion support, and screen reader support.

## **PERFORMANCE TARGETS**

---

Core Web Vitals targets: LCP  $\leq$  2.5s, INP  $\leq$  200ms, CLS  $\leq$  0.1 (75th percentile).

## **IMPLEMENTATION ROADMAP**

---

Phases 0–13 covering foundation, design system, Payload models, homepage, services, case studies, insights, company pages, leads, SEO, accessibility/performance, testing, and production.

## **DEFINITION OF DONE**

---

Complete product journeys, CMS editability, contact conversion, passing TypeScript/lint/build/tests, performance and accessibility targets addressed, SEO complete, security controls implemented, and no fake or placeholder content.
